SUMMARY

"As a Software Engineering student at RMIT University, I strongly believe that technology is the catalyst for turning the impossible into reality. My current focus is on building a robust technical foundation by mastering Object-Oriented Programming (OOP) and deepening my understanding of complex algorithms. I maintain a growth mindset, always eager to absorb practical knowledge and embrace new technological challenges. Ultimately, my long-term vision is to research and develop advanced solutions—particularly in AR/VR and immersive technologies—that seamlessly bridge the gap between virtual experiences and the physical world."

EDUCATION

RMIT University

Bachelor of Software Engineering — GPA: 3.3/4.0

Oct. 2024 – Oct. 2028 (Expected)

Ho Chi Minh City, Vietnam

TECHNICAL STACKS

Programming Languages: Python, Java, C/C++, HTML, CSS, JavaScript

Frameworks & Libraries: React, Supabase, Tailwind, Bootstrap

MLOPs & Deployment: WebSocket, FastAPI, RestAPI

Database: PostgreSQL, MongoDB

Tools: Git, VSCode, Excel, Word, PowerPoints

Soft Skills: Critical Thinking, Problem Solving, Algorithm Solving, Team Collaboration, Time Management, Side-project & School-project Leadership

PROJECTS

EventX: Event Management Application | *Backend Specialist*

[GitHub Repo](#) | **Dec 2025**

- Built end-to-end event platform supporting specialized workflows for four user types: system admins, event organizers, presenters, and attendees, designing the entire backend using PostgreSQL, Java, and JPA framework.
- Developed automated event tools including batch ticket generation, real-time registration with QR code check-ins, and automated email notifications.
- Engineered an analytics suite to monitor event health, revenue, and attendee distribution, achieving a **High Distinction (81/100)**.

Railway Management System | *Database & Application Developer*

[Video](#) | **Dec 2025**

- Architected a relational database from scratch and injected sample data using Oracle APEX, optimizing data integrity for complex train schedules and passenger manifests.
- Developed an end-to-end passenger booking flow featuring real-time trip searching, a dynamic visual seat mapper, and instant booking history.
- Designed an administrative suite with a real-time fleet monitor (Lat/Long tracking) and interactive dashboards to analyze revenue trends and trip performance with QR-code generated tickets, achieving the **highest score in the course (80/100)**.

FlowGuard – Flood Early Warning Platform | *Lead Developer*

[GitHub Repo](#) | **2025**

- Led development of a real-time flood early-warning platform integrating IoT sensors, weather APIs, and tidal data using Next.js, Python, and Supabase, winning **1st place among 100+ teams nationwide**.

HONORS & AWARDS

RMIT Hack-A-Venture 2025 Champion

2025

- Championed an innovation hackathon by developing practical solutions addressing UN SDGs 6, 11, 12, and 13 to promote environmental conservation.

Top 10% Naver AI Hackathon 2025

2025

- Ranked in the top 10% in a talent-acquisition hackathon by creating innovative AI-driven applications to streamline daily tasks and planning.

IC3 Spark Competition 2016 Consolation Award #99

2016

- Earned international certification from Certiport for foundational computing skills, demonstrating an early passion for technology.

LANGUAGES

English: IELTS 6.5 Overall — **Vietnamese:** Native.
